Office Action Summary

Art Unit: 1772

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

2. (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
3. Claims 1, 4, 5, 6, 11, 17 and 27 are rejected under 35 U.S.C. 102(b) as being anticipated by any of Hurt, Hale or Shuert.

All of the above teach multi-layered films containing dome structures. Refer to Fig. no. 4 in Hurt. Refer to fig. Nos. 6, 9 and 10 in Hale. Refer to Fig. Nos. 3, 5 and 12 in Shuert.

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 2, 3, 7-10, 12-16 and 18-26 are rejected under 35 U.S.C. 103(a) as being unpatentable over any of Hurt, Hale or Shuert as applied above in view of Seksaria.

The primary references fail to teach the varying size and/or shape of the domes in order to conform to different sized articles.

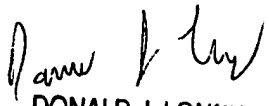

Sekswaria teaches to form domes of varying size and shape in order for the sheet to conform to different shaped articles. Refer to the Abstract, Fig. Nos. 2-4 and column 1, lines 60 through column 2, line 32.

Art Unit: 1772

Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to the primary references to vary the shape and/or size of the domes, as taught by Seksaria, for the purpose of the sheet being able to conform to different size objects.
